DETAILED ACTION

An extension of time under 37 CFR 1.136(a) is required in order to make an examiner's amendment which places this application in condition for allowance. During a telephone conversation conducted on 10/12/2007, Cameron Beddard requested an extension of time for 1 MONTH(S) and authorized the Director to charge Deposit Account No. 05-1323 the required fee of \$120.00 for this extension and authorized the following examiner's amendment. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Cameron Beddard on 10/04/2007.

The application has been amended as follows:

Claims 1-22 are cancelled.

Application/Control Number: 10/623,604

Art Unit: 2884

Claim 23. (currently amended) A method for finding disconnection of a plurality of conductive wires that are formed on a vehicular plate glass and are parallel with each other, the method comprising the steps of:

- (a) applying a voltage to the conductive wires;
- (b) imaging thermal radiation from a surface of the conductive wires by an infrared image sensor, while the step (a) is conducted, thereby producing a temperature distribution image;
- (c) selecting an inspection portion from the temperature distribution image, the inspection portion having a size to cover only a portion of each conductive wire;
- (d) subjecting only the inspection portion of the temperature distribution image <u>having a</u>

 <u>size less than the entirety of each conductive wire</u> to a binarization by an image processor,

 thereby producing a binarized temperature distribution image of only the inspection portion; and
- (e) comparing the binarized temperature distribution image with a data representing a pattern of the conductive wires to determine whether a disconnection exists anywhere in the entirety of the conductive wires, based on the binarized temperature distribution image of only the inspection portion.

Allowable Subject Matter

Claims 23-28 are allowed.

The following is an examiner's statement of reasons for allowance:

With regards to claim 23, the closest prior art, Enachescu et al. (US 6,840,666), teaches a method emplying IR thermography for defect detection and analysis comprising most of the limitations of the claimed invention. However, prior art fails to teach or fairly suggest subjecting

only the inspection portion of the temperature distribution image having a size less than the entirety of each conductive wire to a binarization by an image processor. Instead, prior art describes subjecting the inspection portion, wherein the inspection portion comprises a size greater than a single conductive wire.

Claims 24-28 are allowed based on their dependencies.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Marcus H. Taningco whose telephone number is (571) 272-1848. The examiner can normally be reached on M - F 9:00 - 5:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Dave Porta can be reached on (571) 272-2444. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
